

Presentation group work

Purpose of the presentation

The purpose of the presentation is to showcase your work and tell about the process behind it. It is a final learning opportunity in this course where you will have the opportunity to reflect on your development and share insights with each other.

Required content

- **The design process**

- How wireframes and mockups in Figma were developed.
- Choice of colors, typography, and other UX decisions.

- **Description of the work process and role distribution (if any)**

- **Demo of the application**

Depending on the grade level you have chosen, this part will vary. Below is the minimum that will be presented during the demo:

- Show how the user can navigate between pages.
- Show that products can be added to the shopping cart.
- Show order confirmation after purchase.

- **Code-related reflections**

- Features you are particularly proud of/that were particularly difficult. Discuss and choose for yourself if you want any visual support for this

Voluntary, but appreciated content

- More code-related reflections:

- Coding problems you solved and how you did it.
- The structure of the code and component breakdown.

Presentation format

- You choose how you present your work and in what order. Slides or other visual material are optional but recommended – the important thing is that you present your work clearly.
- If you are unable to attend the presentation, a written report covering the same points (except the demo) must be submitted.

Timeframe

- 20 minutes per group.

Tips for a good presentation

- Prepare your demo so that everything works smoothly. One tip is to publish the app on Netlify so that you have a stable version to show, but this is optional.
- Divide the responsibilities so that everyone in the group gets to speak.
- If something went wrong in the process, tell us what you learned from it!
